

THE STORY OF CURANS

POV: Medical Student in Jordan

**One night,
while attending
the emergency
department**

As a medical student.

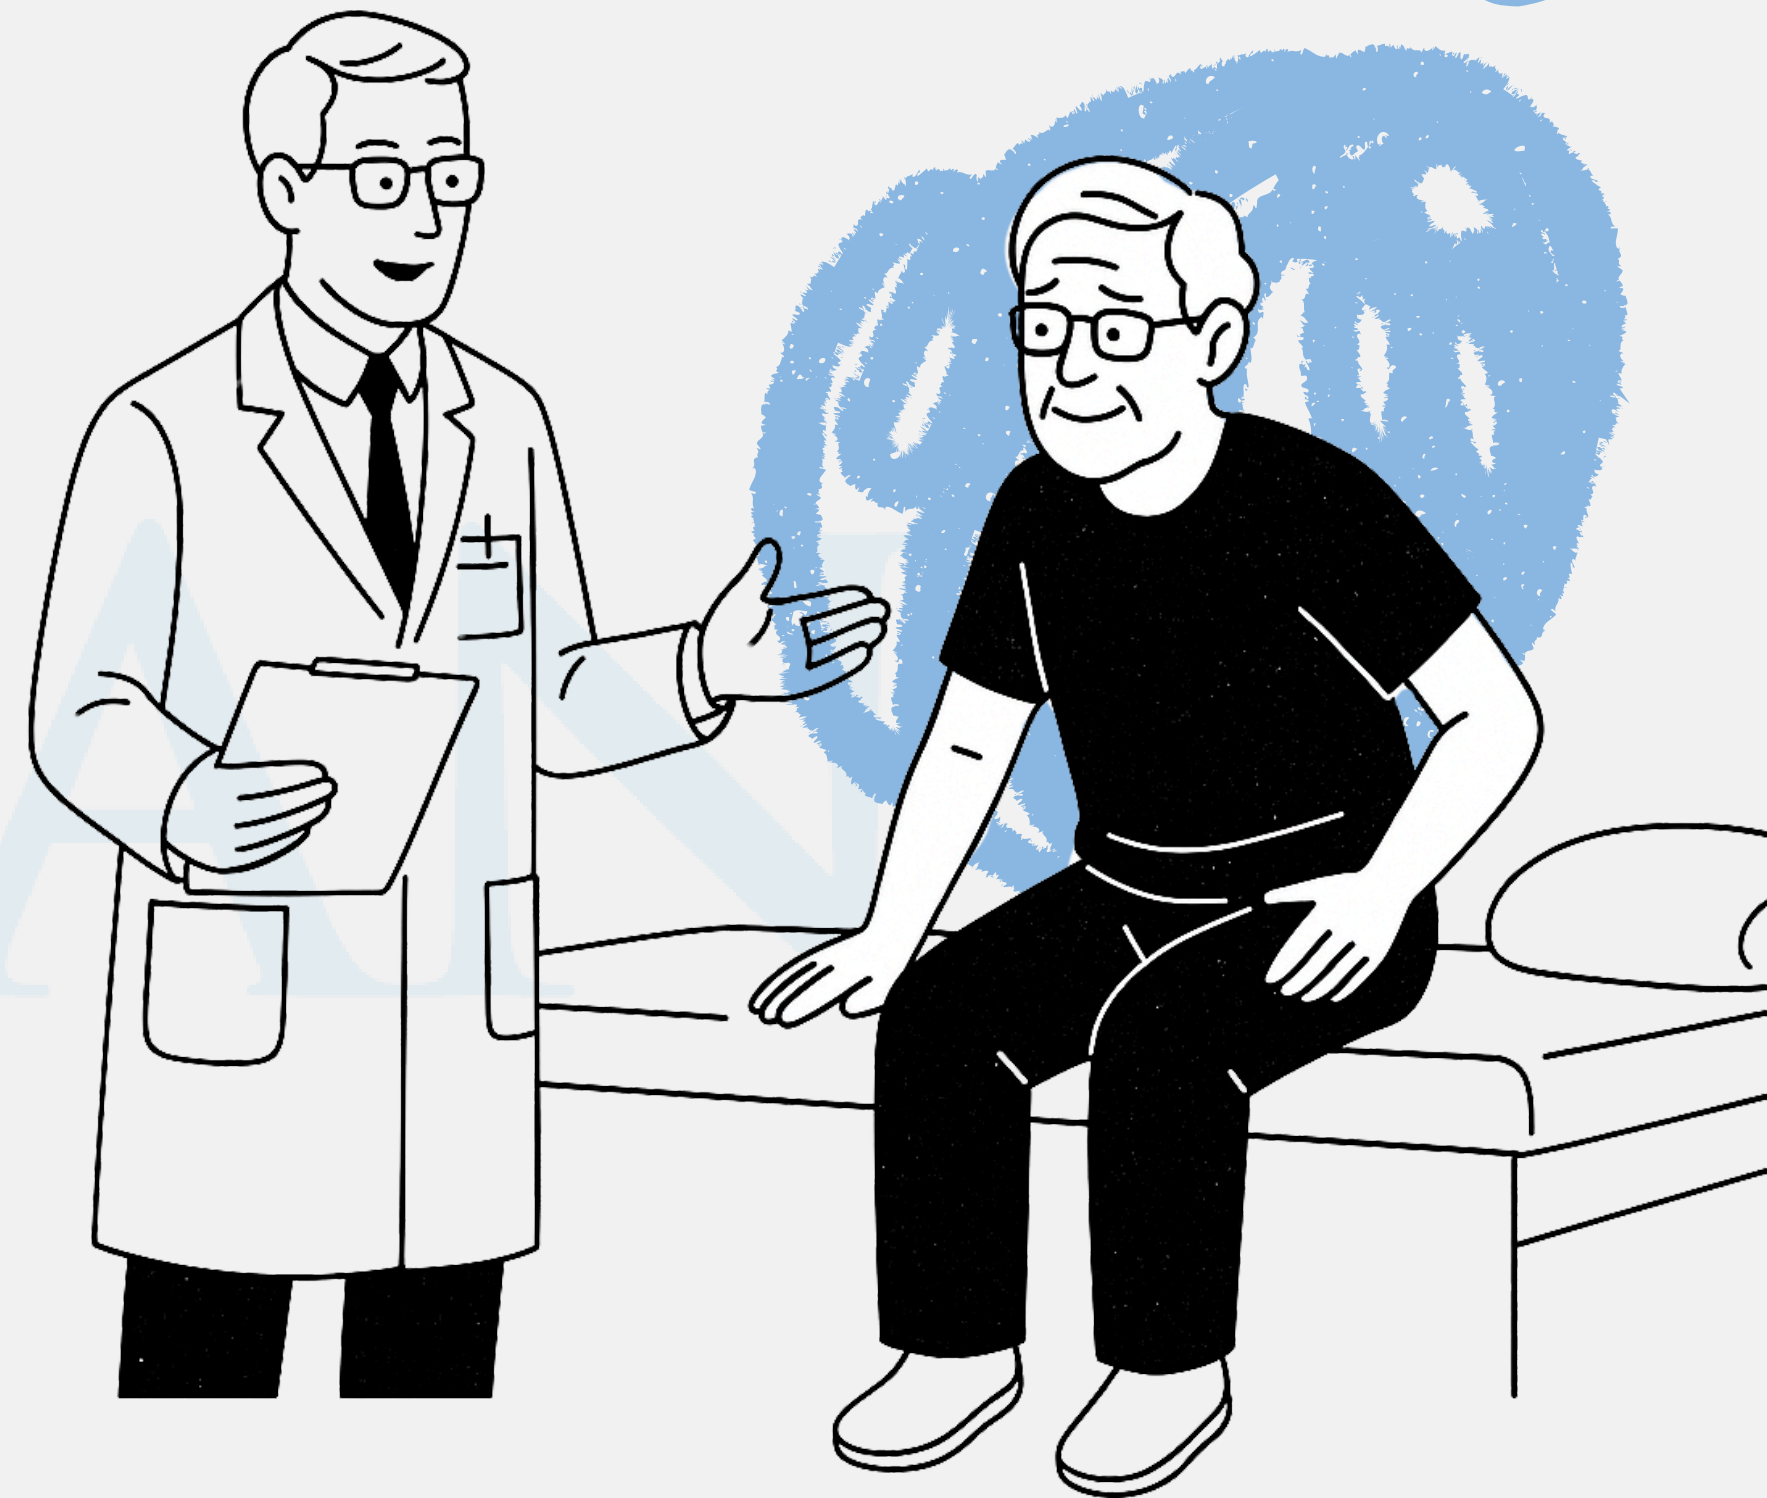

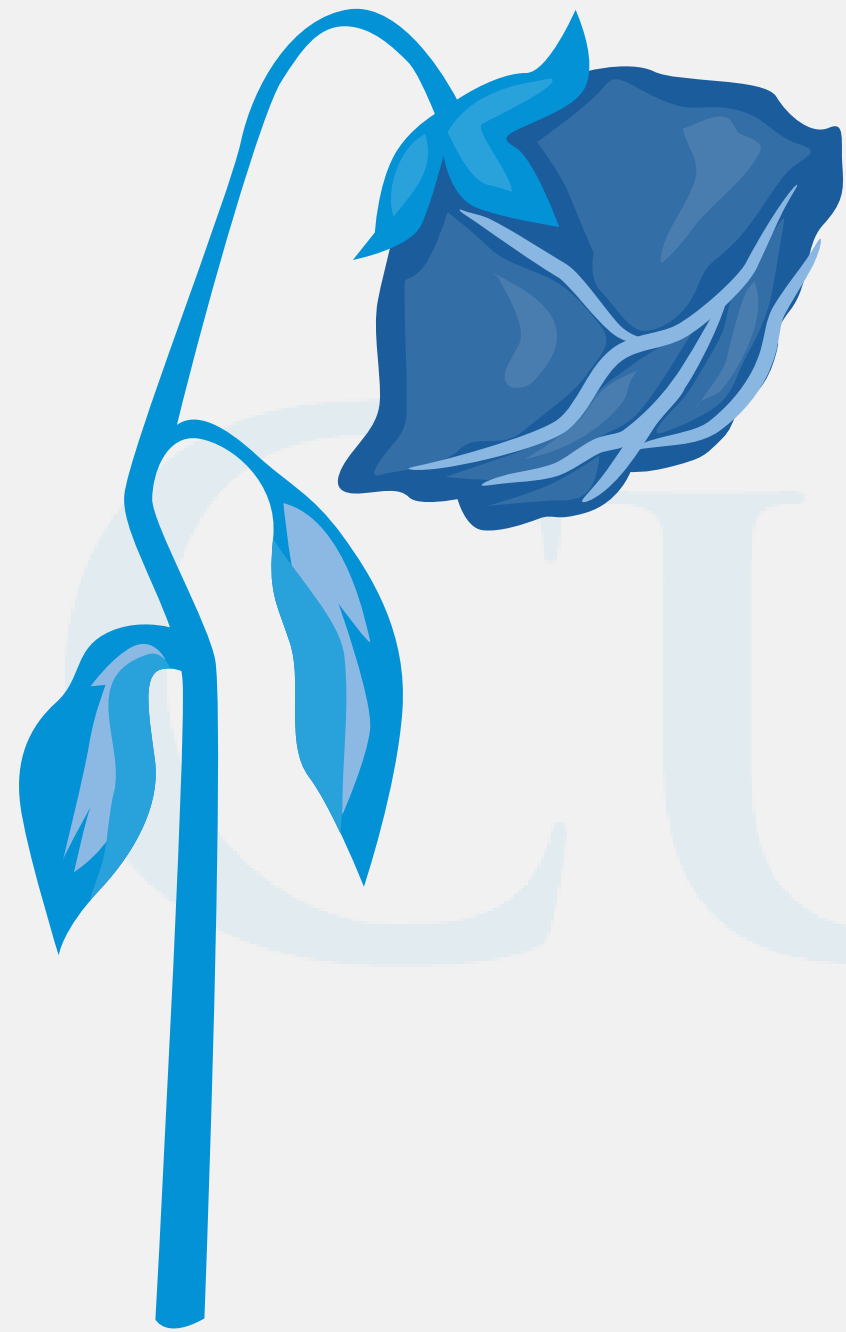

**A 65-year-old
patient came in
with stomach pain**

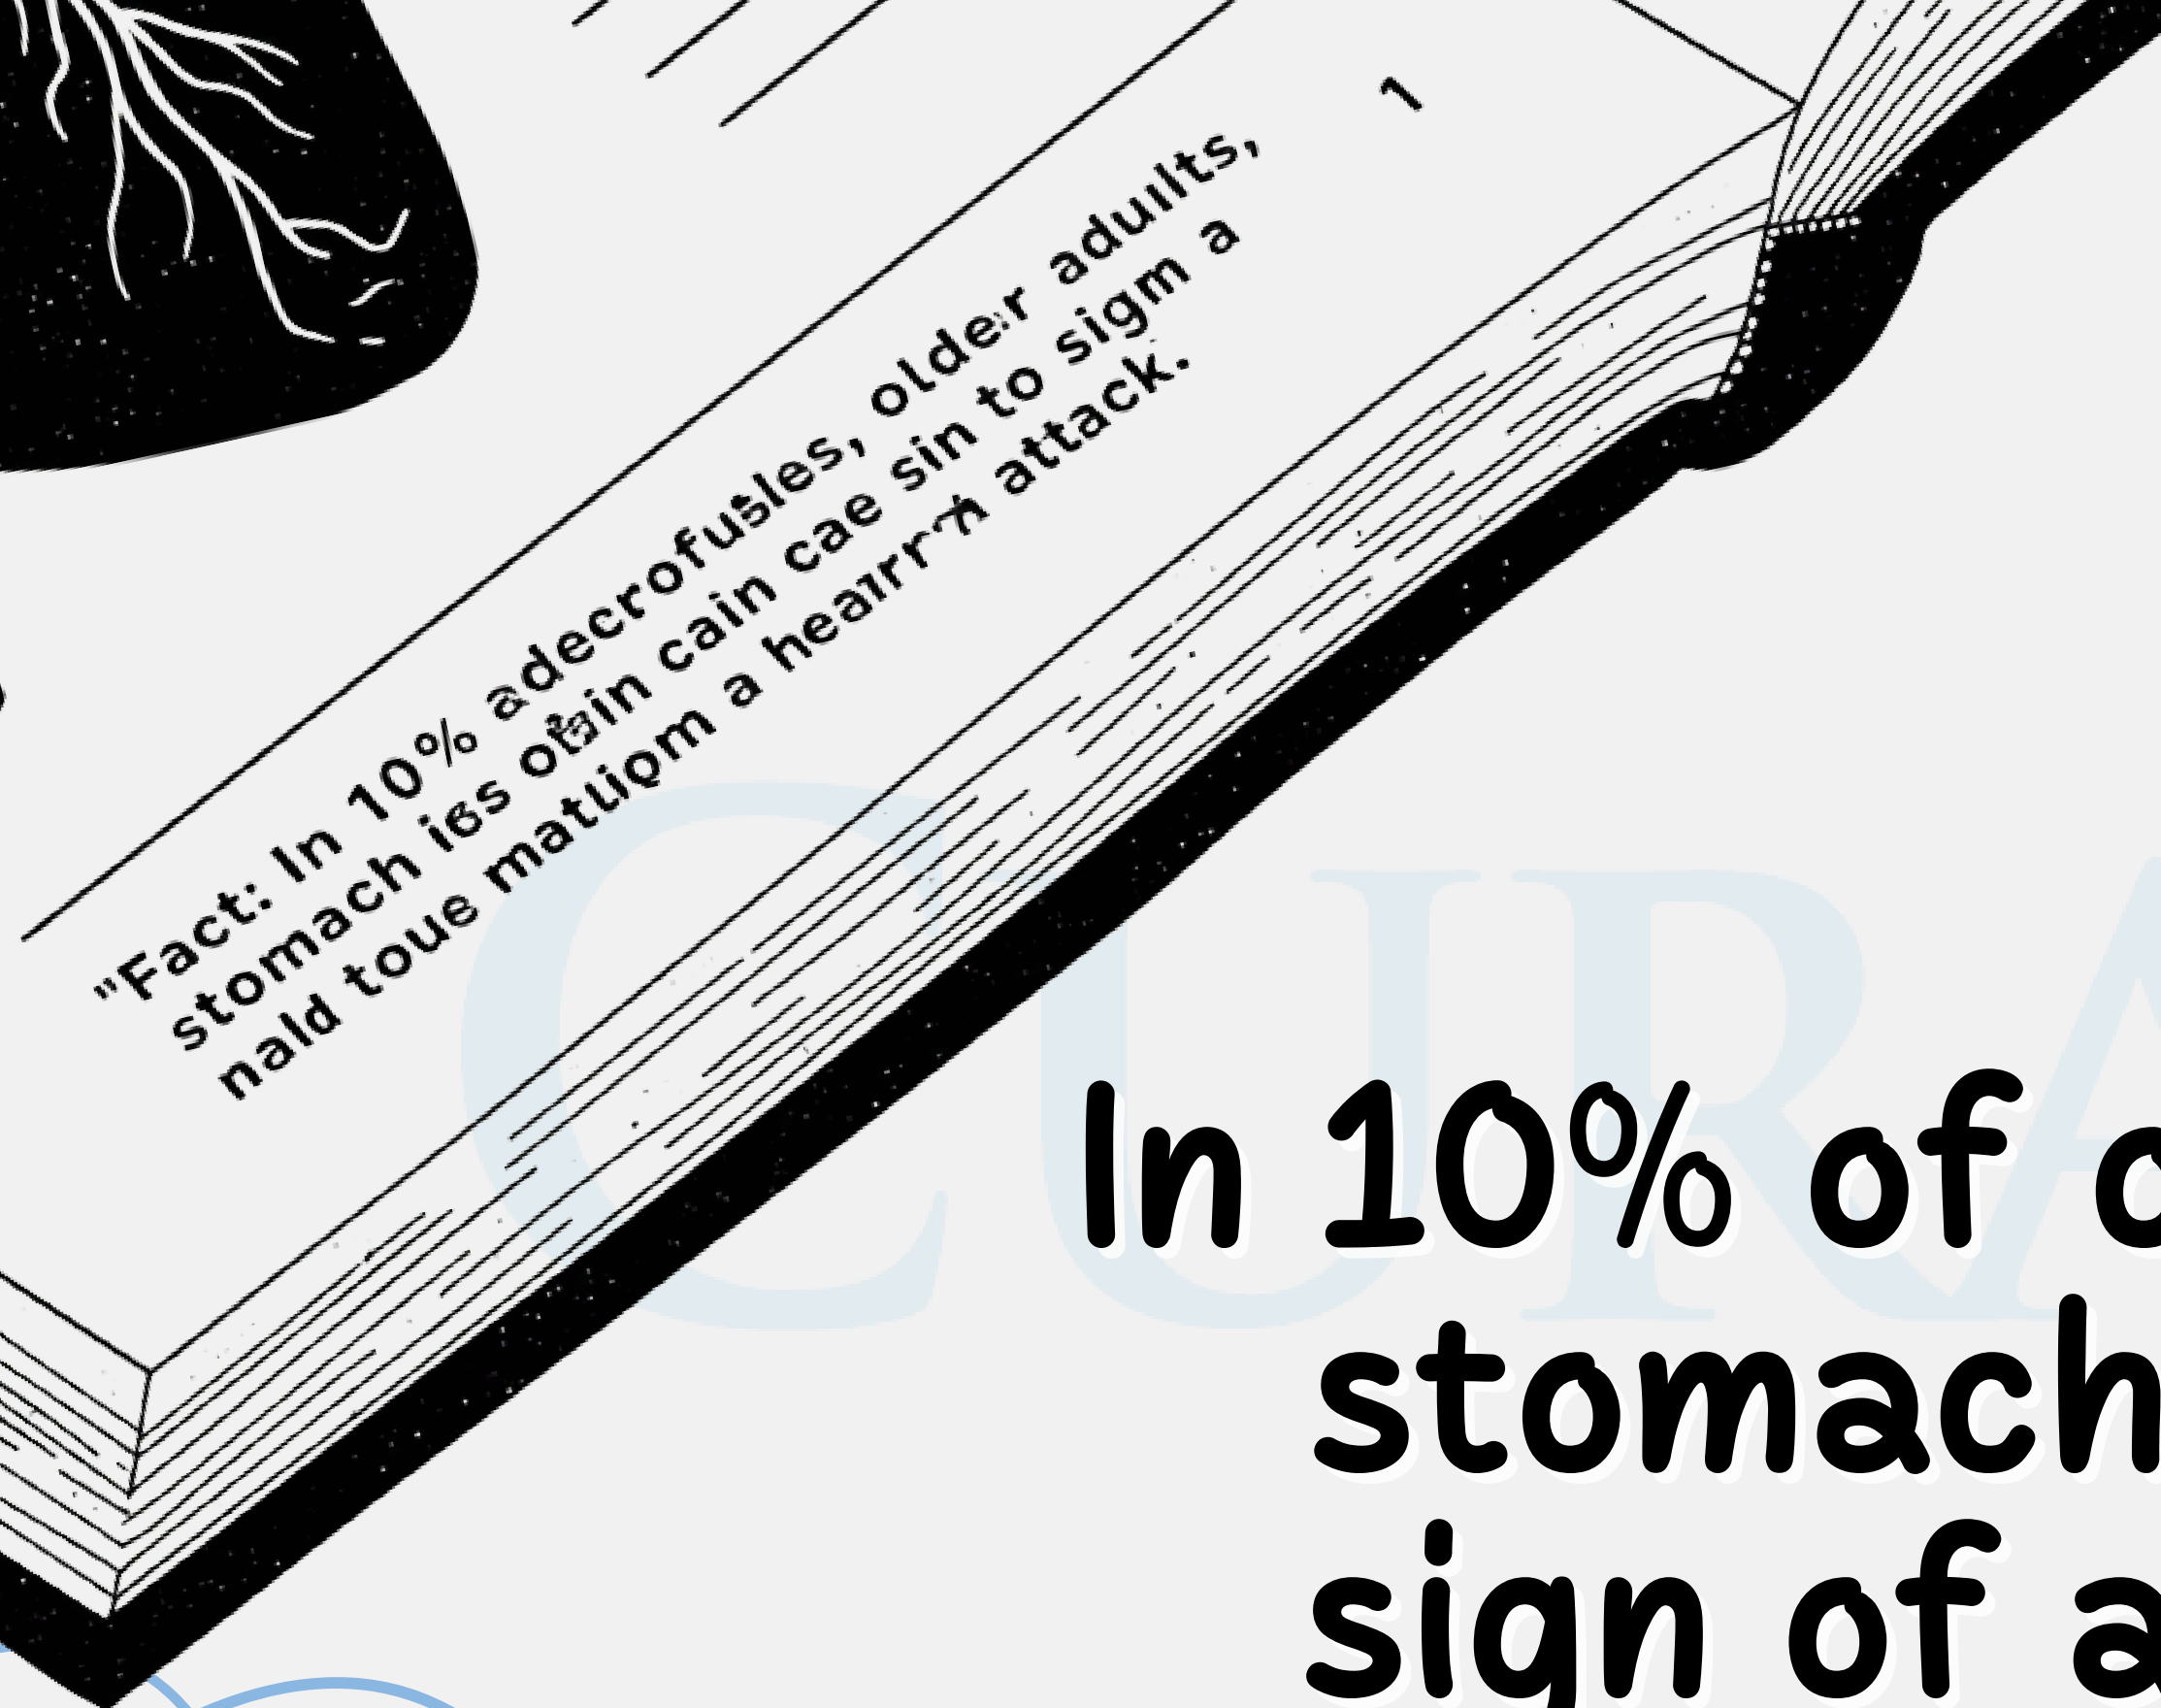

**The doctor
evaluated him
and decided to
send him home:**

Believing it was just
“typical” stomach pain.

**Unfortunately,
the next day, the
patient passed
away...**

Due to a fact not
widely covered in
textbooks:

**In 10% of older patients,
stomach pain can be a
sign of a heart attack.**

It made me wonder:

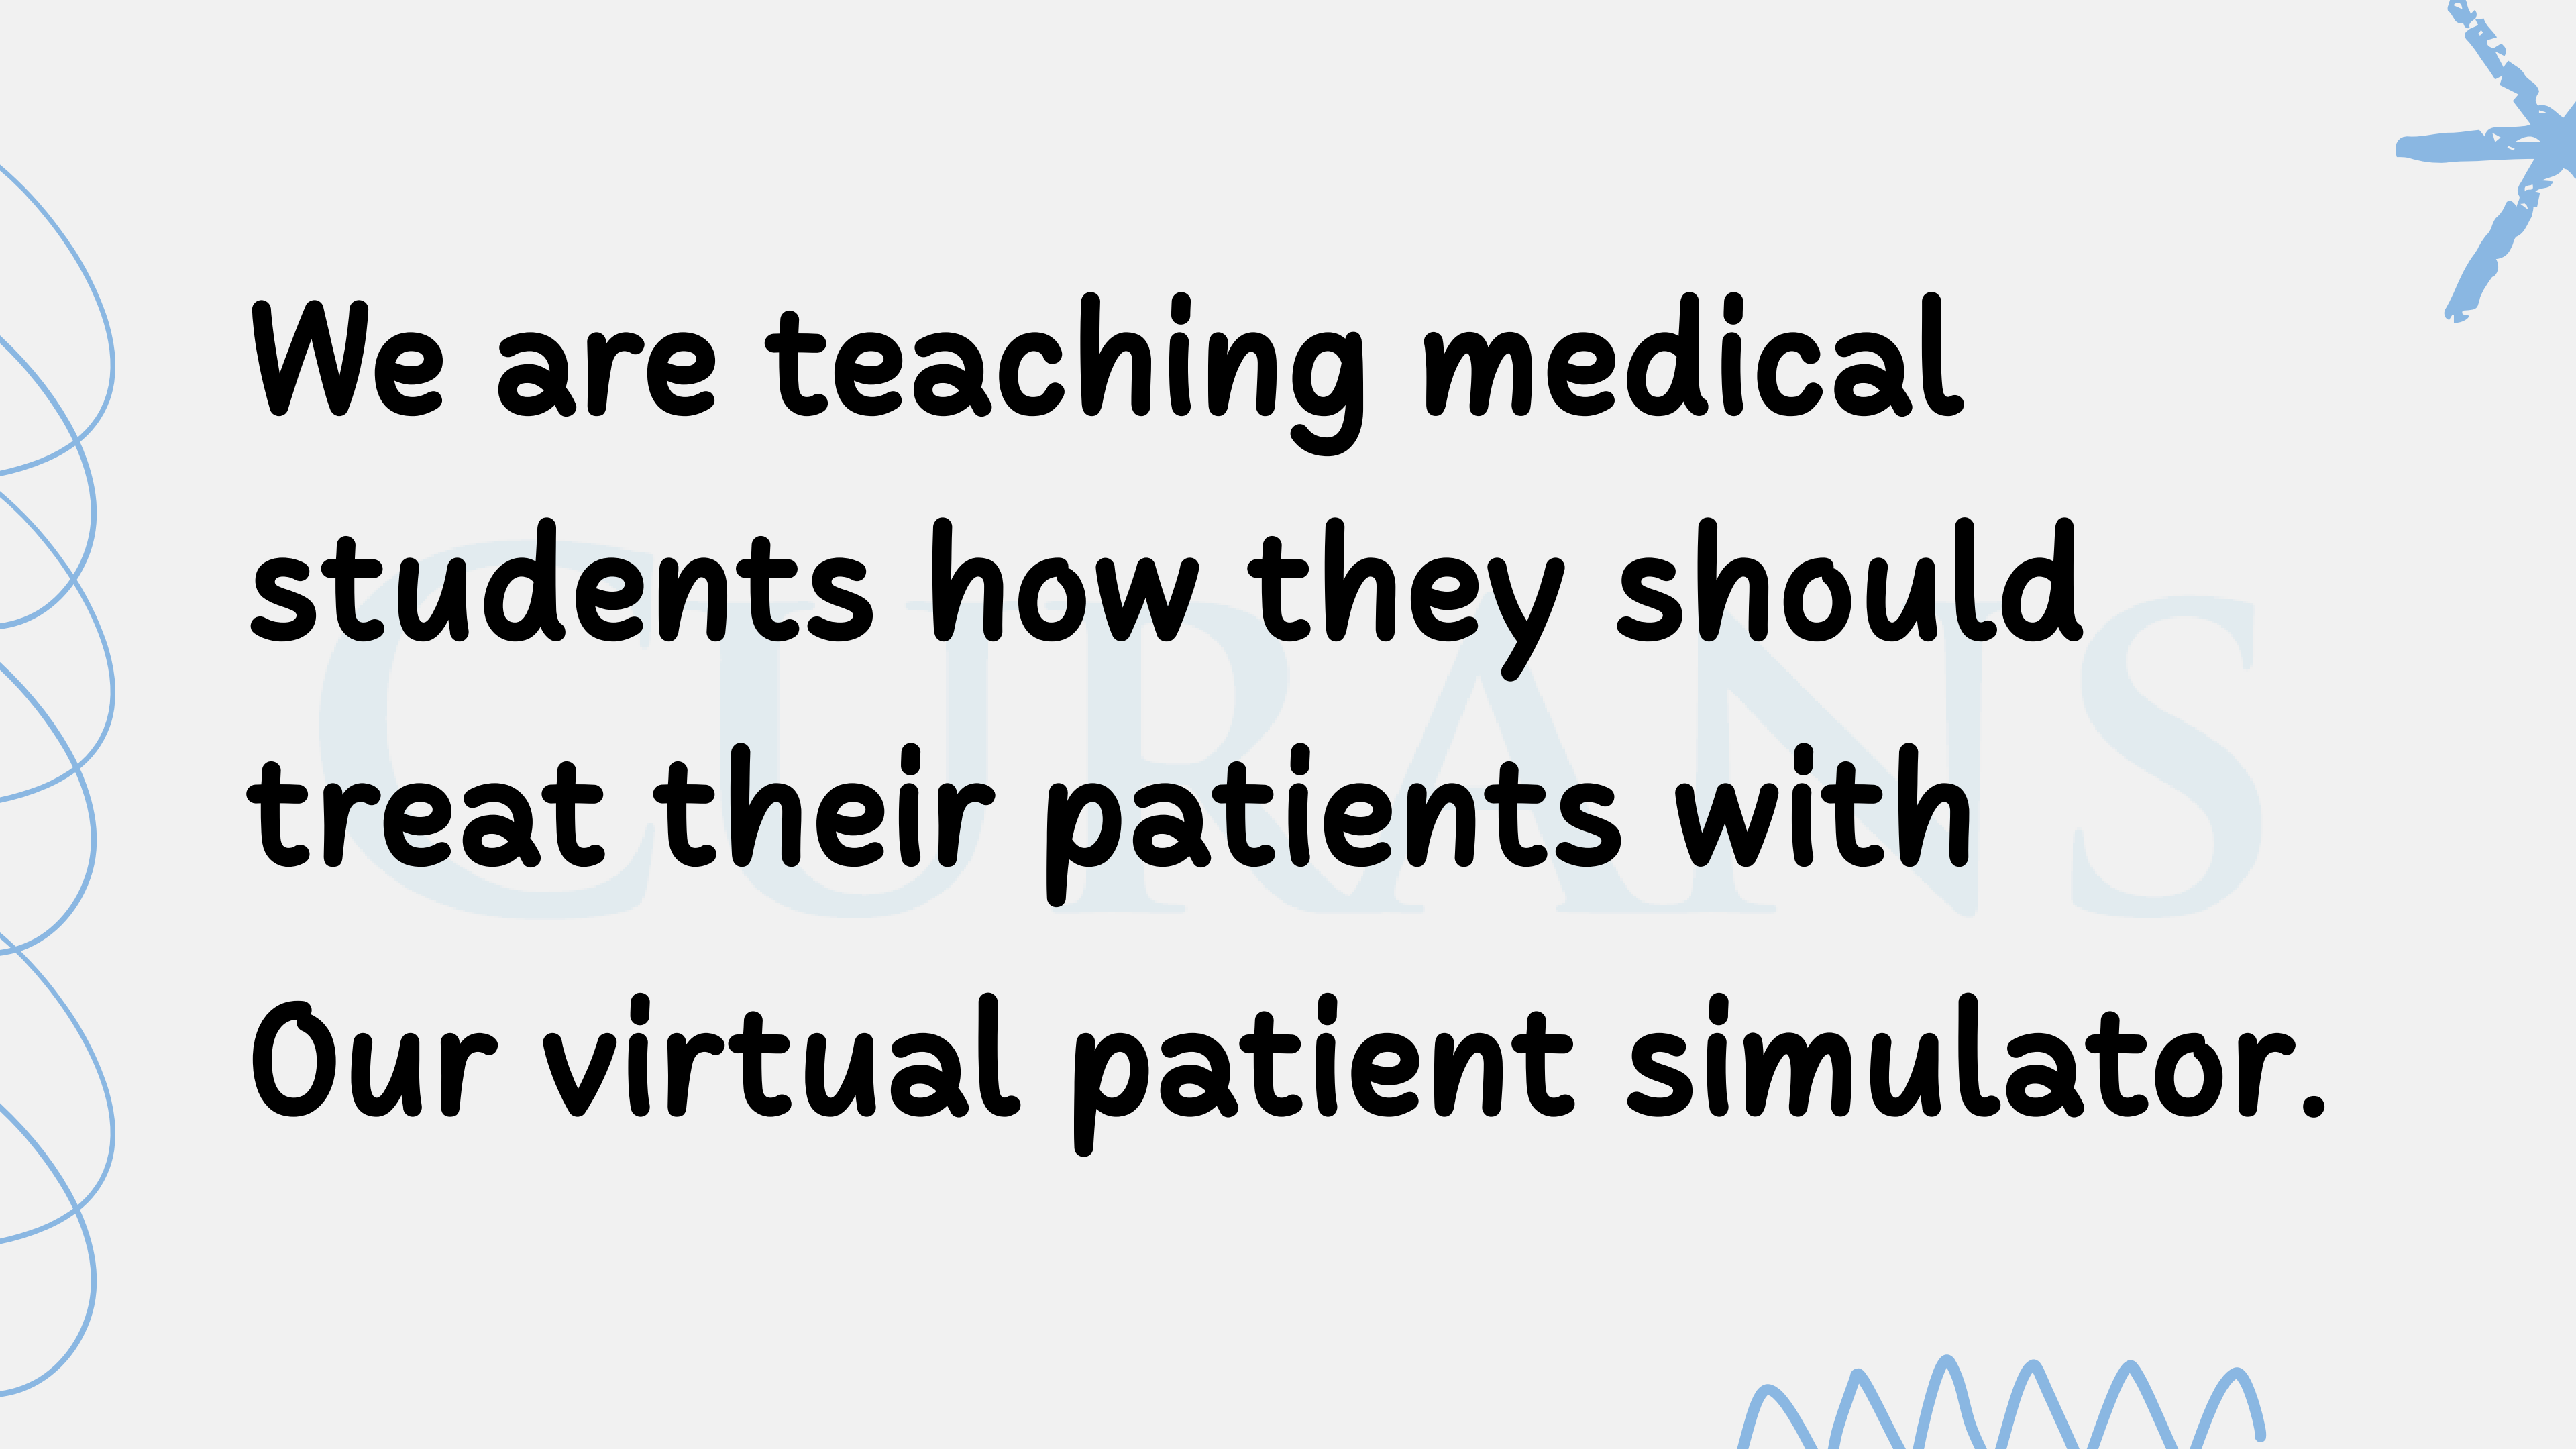

**If the doctor or the physician
had encountered a similar
case before, could this have
been prevented?**

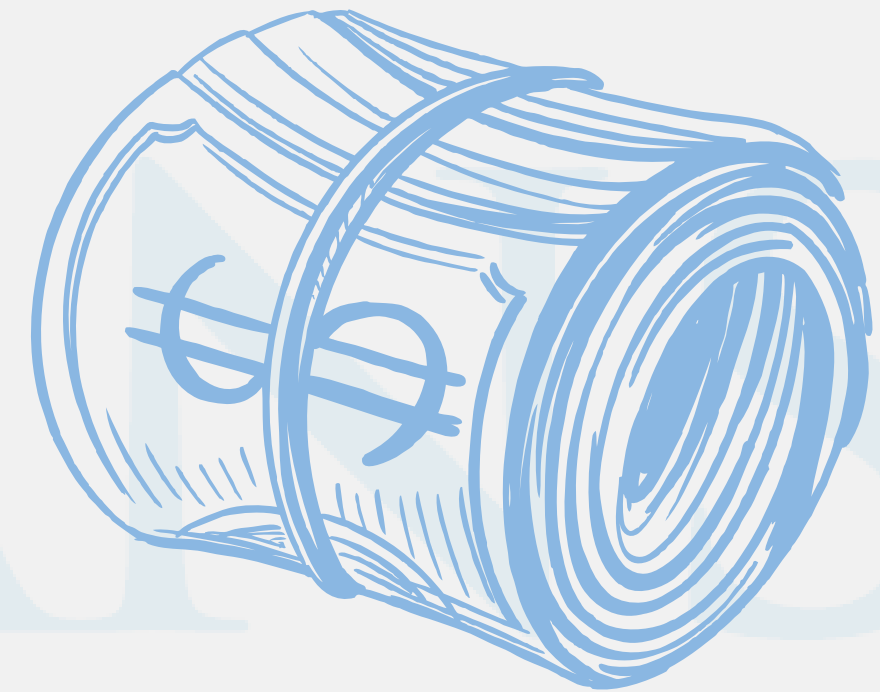

**So, Just as pilots use
simulators to practice
flying**

**We are teaching medical
students how they should
treat their patients with
Our virtual patient simulator.**
