

Medical Education Like Never Before

The Education Gap

PROBLEM STATEMENT:

Medical Students graduate without placing a single order or making independent clinical decisions, lacking confidence in diagnosing, because they lack one-to-one interaction with patients due to safety concerns.

THEORY DOESN'T FULLY PREPARE STUDENTS FOR PRACTICE

Learning from textbooks and lectures alone fails to expose students to the unpredictable details and complexity of real patient care.

A recent Johns Hopkins study says more than **250,000** people in the U.S. die every year from medical errors.*

Our
proposed
solution will
achieve:

85%
Reduction
in Clinical
error rate.
[Ref]

AI INTO MEDICAL EDUCATION.

OUR SOLUTION:

We Provide a safe environment for medical students to improve clinical reasoning skills without risks.

Think of it as a sandbox for medical students to safely explore & learn.

**Simulating The Whole
Diagnostic Process**

SEE IT IN ACTION:

**Diagnostics
Improvement**

**Reduction in
Medication Errors**

COMPETITIVE ADVANTAGE

01

First MENA-focused virtual patient simulator.

02

First simulator to model the communication process.

03

First OSCE platform for medical universities.

04

Case-Creator Tool & Dashboard Analytics.

05

First OSCE platform for medical universities.

06

Braking Bad News Simulation.

Our Additional AI Models:

MEDISEARCH MODEL:

When a user asks this AI model a medical question, it fetches and summarizes research papers from medical magazines, providing the user with the summarized text and resources.

**Evidence - Based
Answer.**

While ChatGPT
scored only 87%

————— **92%**
on USMLE

Our Additional AI Models:

Symptoms 2 Diagnosis

Medical students should provide our AI the patient's presenting complaint. Subsequently, guidance will be provided to the doctor on further steps, including test orders and potential diagnoses, based on their historical accuracy rates.

AI Guidance & Correction

Reinforces Clinical Guidelines

Supports DDx Skills

Other Services:

PDF 2 PODCAST

Convert written lectures and study materials into audio format. Simplify learning by allowing on-the-go access, fostering better knowledge retention, and supporting diverse learning preferences.

MindMaps Generator

Transform your lectures into intuitive mind maps with AI. Automatically extract key ideas and relationships, turning complex content into visual summaries for enhanced comprehension and study efficiency.

Research Platform

Engage with PDFs conversationally & collaborate with colleagues in real time to streamline research and share insights.

Universities (B2B)

- Case-based Exams.
- OSCE Platform.
- Homework Cases.
- Dashboard Analysis.

Business Model:

Medical Students (B2C)

**Access to our case library
for hands-on learning.**

Market Size:

Global healthcare simulation market: \$2.46B → \$8.37B by 2031 (16.5% CAGR).

What Our Clients Say:

Our Social Media Presence:

Supporting Resources

- ✦ Final-year medical students now log fewer than 5 solo patient encounters before graduation; many never place a single order or document an assessment independently [1].
- ✦ According to literature review, final year medical students lack the efficiency to prescribe safely and treat efficiently [2].
- ✦ “Just in Case” panels, a habit that fuels more than \$200 billion in unnecessary spend and avoidable harm each year [3].
- ✦ The effectiveness of using virtual patient educational tools to improve medical students’ clinical reasoning skills: a systematic review [4].
